Revised Anaphylaxis Management Algorithm During COVID Pandemic

To be implemented based on the local risk / benefit assessment

Patients with history of severe anaphylaxis such as those who have been intubated and ventilated, or had reactions treated with more than two doses of epinephrine should follow their routine anaphylaxis plan and activate emergency services immediately when anaphylaxis is recognized.

**IMPORTANT:** Anaphylaxis is a potentially life-threatening, severe allergic reaction. If in doubt, give epinephrine.

### SEVERE SYMPTOMS: ANY OF THE FOLLOWING

**LUNG**
- Shortness of breath
- Wheezing, repetitive cough

**HEART**
- Pale or bluish skin, faintness, weak pulse, dizziness

**GUT**
- Repetitive vomiting, severe diarrhea

**THROAT**
- Tight or hoarse throat, trouble breathing or swallowing

**SKIN**
- Many hives over body, widespread redness

**MOUTH**
- Significant swelling of the tongue or lips

**OTHER**
- Feeling something bad is about to happen, anxiety, confusion

**SEVERE SYMPTOMS RESOLVE**
- Continue to monitor for 4-6 hours for the recurrence of symptoms
- Be ready to administer treatment if symptoms reappear (biphasic anaphylaxis)
- Notify your physician on a non-urgent basis
- Replenish emergency medications

**SEVERE SYMPTOMS DON’T IMPROVE OR WORSEN**
- Repeat epinephrine injection in 5 minutes or sooner if symptoms escalate rapidly

**ACTIVATE EMERGENCY SERVICES (CALL 911)**

**SYMPTOMS DON’T IMPROVE OR WORSEN**
- Many hives over body, widespread redness
- Wheezing, repetitive cough
- Pale or bluish skin, faintness, weak pulse, dizziness
- Repetitive vomiting, severe diarrhea
- Tight or hoarse throat, trouble breathing or swallowing
- Feeling something bad is about to happen, anxiety, confusion
- Itchy runny nose, sneezing and/or Itchy mouth and/or few hives, mild itch and/or mild nausea or discomfort

1. **INJECT EPINEPHRINE IMMEDIATELY** while seated; have telephone within reach
2. Notify a housemate or neighbor to help you
3. Lay down with legs elevated near the doorway, which should be unlocked or open to allow others to enter and help. Keep children in a position of comfort, to minimize respiratory distress and agitation and risk of aspiration in case of vomiting.
4. Administer oral antihistamine, preferably non-sedating (e.g. cetirizine)
5. Administer albuterol for respiratory symptoms if prescribed and available
6. Monitor symptoms and blood pressure/pulse if possible
